

Task No.	Task 1
Title	Create a Webpage titled “College Information Portal”
Course Outcome	CO1

1. Aim

To design and develop a webpage titled “College Information Portal” using HTML5 — covering basic text formatting, lists and hyperlinks (Part A), tables and images (Part B), a student registration form (Part C), and HTML5 semantic elements with media and input types (Part D).

2. Objective

To understand and apply core HTML5 concepts — semantic structure, text formatting tags, ordered/unordered lists, tables, image embedding, form controls, and HTML5-specific input types — by building one complete, valid multi-section webpage.

3. Theory

HTML5 introduces semantic elements such as `<header>`, `<nav>`, `<section>`, `<article>`, and `<footer>` that describe the meaning of page content rather than just its appearance, improving accessibility and SEO.

Text-formatting tags (`<b>`, `<i>`, `<u>`, `<sub>`, `<sup>`) control the visual emphasis of inline text, while `<ol>` and `<ul>` organise content as ordered and unordered lists respectively.

The `<table>` element arranges tabular data using rows (`<tr>`) and cells (`<th>/<td>`), and the `<img>` tag embeds images with an `alt` attribute for accessibility.

HTML5 forms use `<form>` along with input controls — text, email, password, radio, checkbox, select, and textarea — to collect user data. HTML5 also introduces new input types such as date, number, color, and range for richer, browser-validated input.

The `<audio>` and `<video>` elements natively embed media with built-in playback controls, without requiring external plugins.

4. Algorithm

1. Start.
2. Create a valid HTML5 document and set the page `<title>` to “College Information Portal”.

Part A: Basic HTML

1. Add a header with the college name and a nav menu.
2. Write a short paragraph about the college.
3. Show text formatting — bold, italic, underline, subscript, superscript.
4. Create an ordered list of courses offered.
5. Create an unordered list of college facilities.
6. Add hyperlinks to the college website and Google.

Part B: Tables and Images

1. Create a table with Roll No, Name, Branch, and Email columns.
2. Add a row of student data for each student.
3. Insert the college logo image.

4. Insert a campus image with proper alt text.

Part C: Registration Form

1. Add text fields for Name, Email, and Password.
2. Add radio buttons for Gender.
3. Add checkboxes for Hobbies.
4. Add a dropdown for Branch.
5. Add a textarea for Comments.
6. Add HTML5 inputs — Date, Number, Color, and Range.
7. Add Submit and Reset buttons.

Part D: HTML5 Features

1. Use semantic tags — header, nav, section, article, footer.
 2. Embed one audio file with controls.
 3. Embed one video file with controls.
 4. Add a footer with the copyright text.
-
3. Save the file, open it in a browser, and check that every part works correctly.
 4. Stop.

5. Program (Source Code) — exp5.html

exp5.html

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">
<title>College Information Portal</title>
</head>
<body>

<!-- ===== PART D: Semantic Header & Nav ===== -->

</footer>

</body>
</html>
```

6. Expected Output

The screenshots below show exp5.html rendered in a Chromium browser (in four parts, top to bottom) with sample data entered into the registration form, demonstrating all four parts — About section with formatting/lists/links and the student table, the real ANITS logo and campus photo, the fully filled registration form, and the media section with audio/video controls.

ANITS - College Information Portal

Figure 1: College Information Portal — rendered in Chromium browser (top to bottom).

7. Result

The webpage “College Information Portal” was successfully designed and executed using HTML5. All four parts — basic HTML with text formatting and lists, tables and images, a student registration form, and semantic elements with embedded media and HTML5 input types — rendered and functioned correctly in the browser, fulfilling Course Outcome CO1.
